github.com/depressedsauce

Full-stack web developer with 6+ years of production experience shipping client websites, now focused on Vue/Nuxt + Postgres applications. I design and run a multi-tenant SaaS platform covering authentication, payments, scheduling, document ingestion, and a Capacitor-based Android tracker — all on a single Nuxt 4 codebase backed by Supabase Postgres with row-level security. Alongside it I design and operate a five-node virtualisation platform that routes, resolves, proxies and backs up its own network.

Skills

Languages: TypeScript, JavaScript, SQL (Postgres), PHP, Python, Java, HTML5, CSS3

Frontend: Vue 3 (Composition API), Nuxt 4, Tailwind CSS v4, Nuxt UI, Vite, PWA (Workbox), Service Workers, SSR / hybrid rendering

Backend: Nitro server routes, Node.js, REST APIs, server middleware, cron jobs, webhooks, PL/pgSQL functions & triggers, Realtime / WebSockets

Database: Postgres, Supabase, Row-Level Security, JWT custom claims, SQL migrations, schema design, MySQL

Auth & Security: Supabase Auth, CSP (per-request nonce + strict-dynamic), CSRF, rate-limiting, reCAPTCHA v3, role-based access, HSTS / security headers, IDOR prevention

Integrations & Mobile: Moneris Hosted Checkout, Resend (incl. Inbound), IMAP (imapflow), Leaflet, Interac e-Transfer, Capacitor 6, Android, background geolocation

Infrastructure & Networking: Proxmox VE, OPNsense, Linux (Debian), KVM / LXC, DNS & DHCP, DNS-over-HTTPS, Caddy reverse proxy, internal CA / TLS, Tailscale, Proxmox Backup Server, subnetting, Wake-on-LAN

DevOps & Tooling: Git, Supabase CLI, Docker, Playwright (E2E), ESLint, SEO (Schema.org / Sitemaps / OG), WordPress (Elementor, Divi, WP Rocket, Wordfence)

Experience

Web Developer, Driving Headquarters — Richmond Hill, ON Sept 2019 — Present

- Sole developer of a single Nuxt 4 codebase serving a public marketing site, four role-based dashboards (student, parent, instructor, admin), a payments + financial-ledger system, an email-driven document-ingest pipeline, and a live GPS lesson tracker — all on Supabase Postgres with zero self-hosted servers.
- Designed a role-based authorization model enforced in three layers — client route middleware, server `requireAuth`/`requireRole` guards, and Postgres RLS policies driven by a JWT custom-claims hook — so a leaked service key still cannot return another user's rows.
- Built a payments pipeline with Moneris Hosted Checkout: server-to-server verify, an immutable transaction audit trigger, payment-plan modelling, and an e-Transfer claim/reconciliation workflow.
- Engineered a document-ingest pipeline that auto-routes forwarded emails (BDE receipts, MTO certificates, driver licences) to the right student via per-kind extractors, content-fingerprint dedup, and a fuzzy student matcher.
- Shipped a live GPS trip tracker using Capacitor background-geolocation as an Android foreground service with offline buffering, played back on a Leaflet map over Supabase Realtime.
- Hardened the public surface with nuxt-security CSP (per-request nonce, strict-dynamic), custom CSRF middleware, IP+session rate limiting, reCAPTCHA v3, and honeypot / dwell-time bot defence.

- Authored 60+ versioned SQL migrations via the Supabase CLI workflow and a Playwright QA harness that runs a full regression pass (auth, role gating, payments) before every deploy; migrated the live business off WordPress with no downtime or SEO loss.

Web Developer, Tamil Heritage Month Dec 2022 — 2025

- Built the site end-to-end in the Divi theme builder with custom layouts and brand styling for a content-heavy, editor-friendly community site.
- Handled a full hosting migration — DNS / nameserver cutover, fresh WordPress install, content restore, and SSL — with no loss of content, and resolved the issues that came up during cutover.

QA Tester, Lynx ERP Solutions 2020 — Present

- Test client websites across browsers and devices, surfacing functional and UX issues before users hit them.
- Document defects with clear reproduction steps and give the development team structured, actionable feedback.
- Log, triage, and help fix each issue, then verify the fix — closing the loop from report to resolution.

Web Development Intern, Lynx ERP Solutions Jun 2019 — Aug 2019

- Contributed to client website builds using HTML and PHP across multiple client projects.
- Supported MySQL-backed data management — early exposure to the data and server layer that informs my current full-stack work.

Projects

Five-Node Proxmox Infrastructure — self-hosted 2026 — Present

- Built five standalone Proxmox VE nodes from second-hand office hardware, deliberately avoiding a cluster because quorum requirements conflict with powering nodes down; aggregated into one view through Proxmox Datacenter Manager.
- Replaced the ISP router as LAN gateway with an OPNsense VM on two physically separate NICs, sequencing the cutover so that no address, static route, or DNS rewrite had to change.
- Operate filtering DNS over DoH, a Caddy reverse proxy issuing certificates from an internal CA, Tailscale remote access with no inbound ports, and Proxmox Backup Server with scoped API tokens and restores verified against a throwaway target rather than assumed.

Certifications

- AWS Certified Solutions Architect – Associate — Amazon Web Services
- AWS Certified Cloud Practitioner — Amazon Web Services
- CompTIA Security+ — CompTIA
- Certified in Cybersecurity (CC) — ISC2
- Google Cybersecurity Professional Certificate — Google
